PROFESSIONAL SUMMARY

Applied AI engineer building enterprise retrieval-augmented generation (RAG), multi-agent workflows, and multi-tenant AI applications in Python. At Maly Tech, contributed to Deloitte Middle East's tax AI assistant and developed reusable customer-specific agent platforms. Public LangGraph/FastAPI project demonstrates backend architecture, tool integration, authentication, persistence, and testing.

PROFESSIONAL EXPERIENCE

Maly Tech Ltd | Generative AI Engineer | Dubai, UAE **Aug 2024 - May 2026**

- Contributed to the AI assistant for Deloitte Middle East's ME Tax Pulse, implementing RAG/LangGraph workflows for ingestion, indexing, and retrieval across thousands of tax and legal documents.
- Built AI4ALL, a multi-tenant platform for customer-specific AI agents and prototypes using Python, Google ADK, agent orchestration, and tool calling; reduced prototype delivery from days or weeks to hours.
- Developed Luna, a RAG-powered financial assistant using few-shot prompting, ReAct, and context injection; associated with a reported 60% reduction in routine customer-support tickets.

Freelance | Software Developer **Oct 2023 - Aug 2024**

- Developed and maintained web applications with Angular, Laravel, and REST APIs, integrating backend services and building reusable UI components.

SELECTED PROJECTS

LangGraph Agent - Clean Architecture | https://github.com/eng-mostafa-alrahal/langgraph-agent-clean-architecture **2026**

- Built a production-oriented FastAPI/LangGraph reference backend with JWT-authenticated chat, PostgreSQL/SQLAlchemy persistence, Redis, optional Celery workers, human-in-the-loop approval, MCP tool integration, and tests.

Multi-Agent Travel Planner | https://github.com/eng-mostafa-alrahal/autonomous-travel-guide **2026**

- Built LangGraph workflows coordinating specialized planning agents and dynamically creating destination-specific RAG knowledge bases when indexed information is insufficient.

Multi-Tenant Document Ingestion Pipeline | https://github.com/eng-mostafa-alrahal/rag-document-processor **2026**

- Automated parsing and vectorization of PDF, DOCX, PPTX, TXT, and Markdown content for RAG systems using Docling, LlamaParse, and Jina late chunking.

Fruitful Tree Count Management | Graduation Project | https://github.com/eng-mostafa-alrahal/fruitful-tree-count-management **2024**

- Developed computer-vision and deep-learning methods for fruit-tree detection from satellite imagery; reported >90% accuracy.

TECHNICAL SKILLS

AI & data: RAG, LLM applications, LangGraph, LangChain, Google ADK, tool calling, multi-agent orchestration, prompt engineering, Docling, LlamaParse, pgvector.

Software & infrastructure: Python, FastAPI, REST APIs, SSE/WebSockets, PostgreSQL, MongoDB, Redis, Docker, Git, GCP, TypeScript, Angular, Laravel.

Additional ML: PyTorch, scikit-learn, OpenCV, NLP, computer vision.

EDUCATION

Damascus University | B.S., Information Technology Engineering (AI & NLP specialization) **2025**

GPA: 3.78/4.0 | WES-evaluated U.S. bachelor's degree equivalency
